Edlund's Drug Store

THE REXALL STORE
Telephone 3 : Crossfield

Notice

Early last spring we asked our customers to place their COAL orders with us promptly. Most of these orders have now been at least partially filled, but there are still some people who have no coal on hand, and their position is going to be desperate unless relief comes in some way VERY SOON.

We earnestly ask ALL THOSE WHO ARE GOING TO NEED MORE COAL FOR THE BALANCE OF THE WINTER to file their orders with us without delay.... This will give us SOME idea as to the amount of coal needed in the district, and while we don't make any rash promises, we'll do our best to see that any coal received by us will be distributed as fairly as possible.

Help US to help YOU—PLACE YOUR ORDER NOW!

Atlas Lumber Co. Ltd.

H. R. Fitzpatrick

Crossfield, Alta.

Tractor Overhauling

Last winter we had the Company experts over-haul a considerable number of Tractors for our customers and the results were so satisfactory that we are again making arrangements to have either MR. GARVIN or MR. GLOVER with us for whatever time is required, and we would like to do the work as early as possible.

If you would like your tractor put in first class condition this winter, will you get in touch with us at once.

William Laut The International Man

Telephone No. 9

Crossfield, Alberta.

Spr. Henry Johnson Writes From England

Mr. and Mrs. A. E. Edlund were visitors in the city Wednesday afternoon.

Joe Gilchrist sold some fat cattle to Keith Cochran.

Peter Massie of Midnapore, shipped out four carloads of cattle this week.

Dave Weiman is combining for Purvis & Sons on the south place.

Fred Edlund made a trip to Dundee, Scotland, this time on leave and will be home in a few days.

It is really wonderful how the people treat us Canadians when we spend a leave in a strange place.

Mr. C. Brittain and Miss June Patmore were visitors at their respective homes over the weekend.

Mrs. Howie has been visiting in the city for the past week returning home on Tuesday last.

Carl and Fred Becker and Wm. Stralo were visitors in the Irricana district on Saturday.

W. W. Stafford and son have moved into the house recently purchased from the McCool State on Line Ave.

Indian summer weather prevails in this part of the country and so far California has nothing on us.

Mrs. Pullan of Calgary was a visitor in town this week and the guest of her son and daughter, Mr. and Mrs. R. H. Ballantyne.

Private Butler, Coulson and Mustard have each spent a furlough this week with their respective families in town.

We hear that Mrs. Blough has disposed of her property on Nanton Line and intend to move to Calgary in near future.

The existing electric lighting at the school was added to last week when the high school rooms were wired for lights.

The Women's Guild will hold their annual Sale of Work in Mr. Laut's Store on Saturday, November 27th.

W. W. Woods I wish again to thank the opportunity to think the Smokes Club for the smokes and for the time you spend in writing such welcome letters. I do appreciate them very much.

HENRY.

Frank Laut, M.L.A. attended the Inter-Municipal Convention in Okotoks this week and arranged the meeting of the Reeves of the four Municipalities forming a large Unit, of which Rosedale Municipality will be a part with the Provincial Minister of Municipal Affairs.

FLORAL PARTY

DEC 1. MASONIC HALL

The Post & F.W. Hall will have a card party in the Masonic Hall on Wednesday evening December 1st. Ladies will provide. Everyone invited. 42-43c.

Percy Blough, Reggie Belsaw and Dennis Stevens of Calgary spent the weekend at their respective homes in Crossfield.

Guy Wickerson met with a painful accident on Tuesday, when he slipped and fell, hurting his arm and shoulder, fortunately no bones were broken.

Another marriage local interest has taken place this week. Robert Williams and Vivian Lind became the lucky couple. We understand the ceremony was held in Calgary.

A meeting of the recently organized Post War Reconstruction committee will be held on Friday evening next at 8:30 in the office of the Secretary of the Post.

Win Landymore has engaged Gordon Poyner of Bowden to work on the farm and Mr. and Mrs. Poyner and young daughter will move to the old house on the hill.

Murdoch's lake has been a very popular place for the youngsters who have been getting in plenty of skating lately and Sunday there were no less than 50 on the big pond.

Mr. and Mrs. C. C. Stafford, W. W. Stafford, Mr. and Mrs. Mervin Smith, Mr. and Mrs. Palmers and Mrs. Jan Belsaw were seen on the Calgary streets on Monday.

Mr. P. C. McCrea's of New Westminster, B. C. is renewing acquaintances here and is the guest of Mr. and Mrs. Bert Lillie. Needless to say he is the same old Alpha.

L.A.C. George Fleming R.C.A.F. who has been in the hospital at Sheppard, is convalescing and expects to be discharged from the hospital this week.

The Old Timers are getting lined up for the big dance and banquet to be held in the U. F. A. Hall next Wednesday, November 24. Douglas Moodies Orchestra will supply the music of the dance.

Our birthday list for this coming month, Don Coffin on the 24th and week, gives us the names of two celebs. Mrs. O. E. Coffin on the 27th. There must be many more but we just haven't the records.

Old Timers' Round-up Wed., November 24

Everything is in readiness for the annual Round-up of the Crossfield and District Old Timers Association. The big event featuring a football match will be held in the U. F. A. Hall on Wednesday, November 24th. The banquet gets underway at 6 o'clock.

On the question of the Committee have gone to a good deal of trouble to provide the banquet, and we believe that every old timer should show his appreciation of their efforts by attending.

There is no doubt that the annual round-up is the big social event of the year. A good time is guaranteed, entertainment and an old time dance; to say nothing of the reminiscing of the greats of the outstanding events of the past.

Major Bill Wood will present the key of the Village to the Old Timers on Wednesday night.

THE MODERN MOVIES

Appear Primitive Compared To What London Saw Years Ago

A Hollywood film producer predicts that all movies will be in technicolor in the near future. Theatres always do good business when a film is announced in technicolor, and it is a fact that when an ordinary black and white film follows a colored film the former seems relatively uninteresting.

Talkies and technicolor revolutionized the movies, but moving pictures were shown in London just before the last war that make the modern movie almost primitive by comparison. The invention was called "Kineplastikon," and ran at the Scala theatre for several months in 1914.

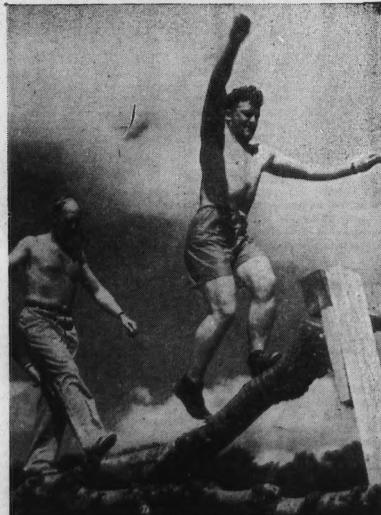

An extraordinary feature about "Kineplastikon" was that there was no screen. The theatre was darkened in the usual way, and when the curtain rose there was nothing but a bare, empty stage bordered with neutral drapes, and with normal stage lighting. When the operator turned the crank, the screen looked like any other projection machine, the actors came out from the wings as required by the story, their costumes were in natural colors, and the men, women, animals and "props" seemed absolutely real. There was nothing to indicate that they were anything but a company of actors. There were all kinds of scenery—beautiful gardens, beaches, woods, homes, workshops, everything, all standing out naturally as if placed there by stage hands. To add to the realism, the producer had anticipated the moments, at which the audiences would applaud, and the players came back from the wings and took a bow. The players were enhanced by the fact that there was also a sound track, and the actors spoke, sang and danced to music. A person going into the theatre under the impression that he was going to see a play or extracts from operas, would have been completely deceived. It was the "three-dimensional" photography, which still eludes achievement, and without even a screen to project it upon.

It will be realized, therefore, that the modern movie with all its technicolor and sound, is literally out of date. The only reason we can suggest why no more was heard of "Kineplastikon" is that the inventor was killed in the war and his secrets died with him.

And how old is technicolor? It is only in the last few years that it has become a vogue, yet beautiful colored films of the Indian Durbar in 1911, when King George V was enthroned as Emperor of India, were shown at the same theatre, the show running for two hours, unfolding before the eyes of the people the whole gorgeous spectacle, with its rich colorings of Indian and British regiments and of the Indian princes with their ceremonial elephants and the bizarre dresses of the natives.—St. Thomas Times-Journal.

The mass of the earth has been estimated as weighing about six sextillion, 600 quintillion short tons.

"P.T." Streamlined By R.C.A.F.

—R.C.A.F. Photo.

To condition men physically for combat flying and arduous ground crew duties the Royal Canadian Air Force has developed a new program of "Duty-Fitness" which almost completely eliminates monotonous "physical jerks". It is a program specially designed to develop in airmen the qualities of endurance, strength, co-ordination and burning desire to win. Considerable stress is placed on obstacle courses which include such hazards as crossing a stream on a tree trunk. This movement develops poise and balance. Done on the double it's harder than it looks.

All But Forgotten

An all-but-forgotten delicacy has reappeared in the shops of Naples.

The first white bread that has been seen there for three years has made its appearance. The flour was provided by the Allied military government.

About 75 per cent. of Canada's population is native born.

Top-Flight Hockey Men Join The Army

Canadian Army Photo

Top-ranking amateur hockey stars and former members of the Port Arthur Bearcats, Allan Cup champions, former goalee with Cornwall Flyers in the Quebec Senior Hockey League, enlisted at the same time. They were inducted at Kingston. Shown during the induction ceremony, from left to right, Raymond Laprade, Edgar Farris, and Floyd Ferras, Capt. W. Gray, of Kingston, the induction officer.

Rare Phenomenon

The Bottom Drops Out Of A Road In Ontario

Members of the road committee of the County of Huron, Ont., are much perturbed by a phenomenon on the 9th concession of the township of West Wawanoshan about three and one-half miles east of Dungannon-Lucknow highway, where for some unknown reason the bottom literally dropped out of the road for a distance of about 615 feet.

Trees in the adjoining field were hoisted about 10 feet, while the road dropped almost out of sight.

The cavity filled with water to within four feet of the top of the road. The sink-hole seems to be bottomless as a 21-foot rod failed to touch bottom when plunged into the hole.

Will Continue For Time

Government Controls Not Likely To End When Peace Comes

There are people who talk about the war bringing the end of government controls. It is not sensible.

For the approach of peace is going to bring its own problems, with many of them desperately complex; and to imagine that they can be left to haphazard chances or accidental circumstances is to imagine something that mocks all our professions about a more secure world.

The truth is that whether we like it or no, government planning is going to be with us for a long time—or will be if we are sensible.—Ottawa Journal.

Used Submarines

How The Japanese Managed To Evacuate Troops From Kiska

Vice-Admiral Thomas C. Kirkaldy, commander of the Aleutians area, disclosed that "quite a few" Japanese submarines were sunk by the United States destroyers while the enemy evacuated its garrison on Kiska Island.

Kirkaldy described at a press conference how a destroyer found eight of Kiska and said, "we had some full of evacuees, but we don't know."

Admiral Kirkaldy said he believed evacuation of the Japanese garrison on Kiska, previously estimated at some 10,000 troops, was carried out by submarines and that if the Japanese had not given up the island "heavy casualties" might have resulted when American and Canadian troops landed in August.

Radio Batteries

Portable Radios Now In Retirement Still Need Care

Portable radios, when present batteries are exhausted, will have to be retired for the duration for no more portable radio batteries are being made. There is a definite reason for this.

The need for regular size batteries is too urgent, both for the armed forces of the Dominion and for the owners of battery sets in the general areas, to permit the manufacture of small types for civilian portable sets.

Portable sets not operating should not be neglected, for they will be in use again after the war. Put them away carefully in a cool, dry location.

Worn Gloves

How To Make Use Of Your Worn-Out Gloves

Some people living in the country block up their front door in winter-time with tar paper, and hang a heavy curtain inside. It may not look pretty but it keeps them warm. However, as a compromise between beauty and comfort, hang a heavy curtain over the garden or sun porch door. This is especially important for doors facing north or west. That's where the prevailing winds come from in the winter.

"HAS ENVIRABLE RECORD"

No army is the same force after a year of campaigning. The Eighth is no exception. The Australians who did so well at El Alamein are now in New Zealand. Other units doubtless have been given relief. But the officers and staff, the framework of the gallant Eighth is the same, and its experience and its leadership are its greatest assets. The record of the Eighth Army will live long in British annals.—Christian Science Monitor.

MADE TIME FOR CHURCH

Gen. Sir Bernard Montgomery, whose British 8th Army is driving back the Nazis in Italy, recently paid a flying visit to Cairo. He called his trip a "week-end rest," but found time to read lessons in the Cairo Cathedral and later to give a talk in nearby Cathedral Hall.

NOW FLIGHT LIEUTANT

FO. George Beurling, Canada's leading air ace with 30 German planes to his credit, has been promoted to flight lieutenant and placed in command of a flight in the R.C.A.F.'s famous Wolf fighter squadron.

ALL BUT FORGOTTEN

An all-but-forgotten delicacy has reappeared in the shops of Naples. The first white bread that has been seen there for three years has made its appearance. The flour was provided by the Allied military government.

About 75 per cent. of Canada's population is native born.

Food Problems

Alternate Foods Can Provide Ample Quantities Of Vitamin C

"The products of the farm and victory garden are still standing by to help meet food problems," says Dr. L. B. Pett, director of Nutrition Services.

The shortage of citrus fruits combined with the freeze on canned tomatoes and tomato juice has caused some anxiety among housewives, who wonder if their families are getting enough vitamin C these days.

Dr. Pett says that if good use is made of the alternate foods that are available there is no need to worry. Nearly all vegetables and fruits supply some vitamin C and a few rank equally with citrus fruits and tomatoes as a source of this important vitamin.

If you know what's what in vitamin C-rich foods, the family's needs can be well looked after during this temporary scarcity of the two most useful sources.

Information, compiled by Nutrition Services showing which of the vegetables now available supply vitamin C, and in what quantities, is an ordinary serving of carefully cooked kale, spinach, broccoli or Brussels sprouts, slightly more than half the day's need can be obtained, or as much vitamin C as is provided by a medium-sized orange. A serving of cabbage or cauliflower gives 1/4 of the daily supply while 1/4 of the quota is provided by one medium potato, cooked in its jacket, a serving of squash or turnips. Onions, beets, parsnips and carrots, apples, bananas and pears will each provide from 1/10 to 1/5 of the total daily need in an ordinary serving.

A check of the day's menu with this list will show whether more of these foods should be included to bring the meals up to standard.

"It is better to rely on the fresh vegetables and fruits that are available right now than to start making inroads into supplies of canned tomatoes or tomato juice," says Dr. Pett. He explains that vegetables contain more vitamin C at this time of year than they do in the late winter after having spent several months in storage, and that it is being vitaminized to hang on to those stems of tomatoes as a reserve for the time when fresh vegetables are less plentiful and poorer providers of vitamin C.

Not Altogether Easy

Keeping Straight On The Two Cunninghams In Royal Navy

One of the minor problems of the armchair war strategists and of war news readers generally is keeping straight the two Cunninghams. There are now two of them in top-ranking positions in the British Navy.

Admiral of the Fleet Sir Andrew Browne Cunningham, First Sea Lord, and Admiral Sir John H. D. Cunningham, his son, Andrew's cousin, newly appointed commander-in-chief of the Allied Fleet in the Mediterranean. And just to add an extra hazard to the risk of confusion, especially for those who get their news by word of mouth over the radio, there is Air Vice-Marshal Arthur Cunningham, commander of the Northwest Africa and Tactical Air Force.—Montreal Gazette.

RAILWAY BUILDER

Alexander Mann Had Much To Do With Railway Construction In Canada

Alexander R. Mann, 84, a veteran of railway construction in Canada, died recently at his home in Vancouver.

Alexander Robert Mann, a railway builder when Canada's transportation facilities were being pushed across the prairies and through the Rocky Mountains, remained in the forefront of construction men in the Dominion long after his early rivals had passed from the scene.

Mr. Mann and associates in Northern Construction Company Limited, and other firms completed projects valued at almost \$200,000,000, spread from the British Columbia coast to the Yukon and into Newfoundland and the United States.

In his long career he directed the laying of more than 5,000 miles of railway roadbed.

Born in Action, Ont., July 21, 1861, son of Hugh and Ellen Mann, young Alexander was educated in Acton public schools and went to Winnipeg in 1879 as a farmer and contractor. For nine years, off and on, he worked with Canadian Pacific Railway gangs that pushed steel into British Columbia.

Then he opened a lumber business in Fort Frances, Ont., and in 1890 helped build the Long Lake Branch of the Canadian National. From Ontario he moved to British Columbia to work on the Nakusp and Slocan railway for the C.P.R. from 1893 to 1894, and then contracted to move ore in the Slocan district for the next three years.

He built the Columbia and Western Railway in the Kootenay district in 1898 and then went back to two Ontario jobs, the Rainy River branch of the Canadian Northern Railway for three years after 1899 and the Neepawa and McCreary line for the same railroad in 1903.

From 1898 to 1904, when he built the C.P.R.'s Greenwood branch in British Columbia, Mr. Mann operated under his own name, but by this time he began work on the Toronto-Sudbury branch for the Canadian Northern. Northern Construction Company had been formed with Mr. Mann as president.

Two years later he was working on the Canadian Northern's Goose Lake line in Alberta and Saskatchewan and from 1910 to 1915 his company helped push the Canadian Northern from Edmonton to Vancouver. Four years later his firm developed Great Falls for the Manitoba Power Company, Limited, of Winnipeg.

From 1920 to 1931, Northern constructed in partnership with General-Governor J. W. Stewart on its bigger jobs, including construction of Ballantine Pier and No. 2 grain elevator and jetty in Vancouver, the Second Narrows Bridge across Burrard Inlet at Vancouver, the Wallace Drydock in North Vancouver—now known as Burrard Drydock—and other British Columbia projects.

Major jobs in eastern Canada included the steamship terminal at Three Rivers, Que., and the Detroit-Windsor tunnel under the Detroit River. His firms also built Section 8 of the Welland Canal in Ontario and the Wolfe's Cove terminals at Quebec for the federal government.

R.C.A.F. Aero-Engine Mechanic

An aero-engine mechanic in the Royal Canadian Air Force, Airwoman Brown of Winnipeg, rushes a fire extinguisher to an aircraft waiting to take off on a training flight. Airwoman Brown is as familiar with piers and hammer, as most girls are with their needles. She is the daughter of Mrs. Ethel Brown of Winnipeg.

British Women Are Showing Their Mettle In Accomplishment Of Countless War Positions

THERE is practically no type of work that British women are not engaged in today. The jobs most of them are doing are hard and tiresome. Also, in Britain, there is the problem of blackouts, long distances to and from work, and more stringent rationing than in Canada. All these make the lot of a woman worker in a British factory much more difficult than that of her Canadian counterpart.

In 1941, the British ministry of labour was given power of direction over British women. Under an order, women could be called upon to register in age groups and then posted where they were needed. In December, British powers were extended. Since that time, women can be called as and when needed, to contribute to the war effort.

The British government has helped these embryo war workers as much as possible. It provides training centres and has converted technical schools and colleges into auxiliaries to give the inexperienced workers basic understanding of tools and general factory atmosphere and routine.

Towards the end of their training period, women workers go from "problems" to actual production of small parts. Production benefits directly and indirectly from these training centres.

Today in Britain, in addition to women in the armed forces, auxiliary civilian defence, nursing, police, there are approximately 5,000,000 women working full time in industry. Adding to these the women doing full-time unpaid work in the British Women's Voluntary Services and other volunteer organizations, the number not engaged in some war activity becomes infinitesimal.

The British women's war effort can be divided into four main groups. First comes the uniformed services; this includes civil defence and police. Second, there is nursing and allied services; third, the women's land army, and fourth, women in industry.

In Britain today, 60 per cent. of the personnel of the royal ordnance factories are women. And women are rapidly taking over the machine, iron and steel, shipbuilding, repair and aircraft industries.

The majority of labour is helping women workers of the Old Country in every possible way. Adequate welfare arrangements, canteens, good midday meals and careful health supervision in all factories have their place in the scheme of things.

Farm Machinery

Now Is The Time To Make Any Necessary Repairs

Repair delays particularly during seeding and harvest time often result in great loss of yield and quality. It is a wise policy immediately after the fall work has been completed to make a list of the known parts to be replaced and repaired. Under the conditions that exist and are likely to exist for the war's duration, it is wise to order parts well in advance of their actual need, otherwise long delays are likely to occur.

As far as possible, repairing should be done during fall or winter when there is less work to be done outdoors as during the growing season. Repairs that cannot be done on the farm should be taken to the blacksmith or other repairman in the fall and winter so that his work may be more evenly distributed throughout the year.

In overhauling machinery, all bearings, axles, and similar parts subject to wear should be taken apart and examined carefully. Any that are not likely to work well for another full season should be replaced. Other parts should be thoroughly cleaned and examined, taking particular care to see that the lubricating parts are working well. Parts that are in the ground such as cultivator shovels and discs should also be checked and those that are cracked or badly worn should be replaced. Others may require sharpening to insure best results for the following season.

A reasonable number of well-chosen implements all kept in first class working condition will do better work than many machines in indifferent working order.

SUPPLIES FOR CHINA

For the first time, the Tibet Government has contracted to supply all goods to be carried across its territory, and now military supplies are moving to China through Tibet. The goods will be transported by Tibetan transport contractors employing only animal pack transport, on long and hazardous roads which average 12,000 feet above sea level, and exposed to dry bitterly cold winds from across the Tibetan Plateau for many months in the year.

The city of Kiev is 1,000 years old.

Grading Fox Pelts

This Plan Has Helped To Improve Market In Canada

Prior to the outbreak of the war most of the ranched fur produced in Canada found their way to the British market, where they were offered to the world trade. With the closing of this outlet due to the war, the only market left open to Canada was the United States.

Domestic fox production of silver fox during the season 1939-40 was 325,000. At that time the United States placed a quota of imports of 100,000 pelts and Canada was allotted 58,000. The following year the Canadian imports to the United States was increased to 70,000.

At this period production in Canada was greatly in excess of exports and to allow producers of good pelts the benefit of the United States market, the Dominion Department of Agriculture established a system of grading and qualitative control, allowing only pelts of better grade to be exported. This, in time, proved to be educational to the rancher, as producers of low grade pelts found that there was only a very poor market for such pelts and a policy of extensive culling of inferior animals resulted.

In 1943 an estimated 100,000 pelts of greatly improved quality will be marketed.

Through the efforts of the Department additional outlets were sought with the result that over 100 shipments were made to the South American countries during the past season. Another factor which has greatly assisted in marketing fox furs is the grading system. Canada is the only country in the world which has Government grading of fox furs. This began in a small way in 1939 and has developed to the point where complete and the most up-to-date grading has been adopted.

The ministry of labour is helping women workers of the Old Country in every possible way. Adequate welfare arrangements, canteens, good midday meals and careful health supervision in all factories have their place in the scheme of things.

NOT MUCH HELP

Lieut. Ian P. McGeal, soaring around over the Kansas plains, suddenly realized he was lost. He recalled flying instructions had told him to swoop low over the water tower and read the name of the town he got lost. He spotted a tower and had to drop to 500 feet before he could read the sign. It said: "Go to church Sunday."

MORAL LESSON

As the New York Sun sagely remarks: In the spectacle of General Sir Bernard Montgomery, who has pressed the Germans all the way from El Alamein up into Italy, devoting part of a weekend respite from the assault to reading the lessons at the Cairo Cathedral and addressing a Bible class, there is food for thought in countries where devotion to religion is considered a sign of weakness.—St. Catharines Standard.

Most women have a keen sense of humor—the more you humor them the better they like it!

Famous Indian Runner Officiates At Marathon

—Canadian Army Photo.

Shades of yesteryear added color to the annual Round-the-Bay Marathon at Hamilton, Ont., with the presence of Tom Longboat, famous Indian long-distance runner around the turn of the century. Longboat, who was a judge of the 19-mile grueling, is pictured shaking the hand of Sgt. Gerard Cote, of the Canadian Army, former winner and favorite. Cote took ill at the 17-mile mark and finished second.

A Coming Province

Says Alberta Has Coal Resources Greater Than Germany And Poland

The following is from a speech by Griffith Taylor, professor of geography, University of Toronto, before a service club meeting in Toronto: "Apparently the Federal Government and military authorities are not interested in the political geography of this country. Canada must be awakened from her lassitude and her citizens shown that the Dominion, with its vast spaces and resources, holds an important place in national planning."

"Alberta is the coming province, if the authorities get over the thought that there is no room for expansion. Alberta has coal reserves one and a half times greater than Germany and Poland, but only a fraction of this is being mined along the railways while in Germany this fuel supply is the very backbone of industry."

A MORAL LESSON

As the New York Sun sagely remarks: In the spectacle of General Sir Bernard Montgomery, who has pressed the Germans all the way from El Alamein up into Italy, devoting part of a weekend respite from the assault to reading the lessons at the Cairo Cathedral and addressing a Bible class, there is food for thought in countries where devotion to religion is considered a sign of weakness.—St. Catharines Standard.

Being short of time, the toy-makers like the idea of children building their own toys, so up in Santa's workshop the production line is busy on pieces of this and that, and the intention is to leave the intriguing assembly to Johnny himself.

Battalions, tanks, jeeps, airplanes and guns are being made of plastic and wood, and they will move down Japanese and Nazi soldiers, sailors and airmen made of cardboard placed on wooden stands.

Although often heard, whip-poor-wills are seldom seen, due to their camouflage and daytime inactivity.

In 1939, Canada was the greatest foreign trader per capita in the world.

"Grooming" Locomotives For Wartime Work

"Grooming" is one of the highly important jobs accomplished daily in Canadian National Railways roundhouses throughout the country. The term applies to the servicing of locomotives before they leave the stalls to start a long journey hauling a troop train, or one of those big fast freight trains up the carloads of supplies and materials. Grooming is usually unseen by the public but it is one of the multiplicity of daily tasks each essential to the Railway's war effort.

This grooming consists of filling the engine tender with coal and water; cleaning, greasing and oiling; making

necessary adjustments and light running tests; testing the electrical and water pump systems; and a thorough inspection of the locomotive to ensure perfect operation. This takes from two to two hours for a turn-around job and three to four hours for a general servicing.

At Canada's largest and busiest roundhouse, Turcot, in Montreal, operating a 24-hour basis, Canadian National motive power is turned out at the remarkable rate of one locomotive in less than seven minutes. Accommodation is available for 62 engines, five of the 57 pits each being capable of servicing

two iron horses at the same time. Activity is at its highest point between four and eight p.m., with the five to nine a.m. period a close second. For a single day, the record turnout was 100 locomotives, despite the fact that Turcot maintains a daily average of 135 despatches, which the staff of 480 workers consider something for other roundhouses to shoot at.

The photograph shows a fleet of locomotives awaiting attention with one of the latest design types, marking out the roundhouse's latest design, marking out the turntable under the guidance of a hostler to go on a track for its train.

Magic Rays Back Of Pilots Flying Over Enemy Countries For Destruction Of Axis Power

A CANADIAN plane is flying over Germany, bent on the destruction of Axis power. Back of the controls is a young pilot. Back of the pilot stand scientists with magic rays—X-rays and gamma rays—guaranteeing a standard of perfection in Canadian aircraft.

New Uses For Glass

Can Now Enter As Raw Material For Industries Of The Future

Glass is being transformed into a triple-threat raw material for the industry of the future. It will compete with steel, with textiles, and with building materials. Its natural defects are being overcome and its natural advantages enhanced.

As with many major wartime developments, not all the story can be told now. But enough can be related to show that the potential advantages of glass will be an amazing material for both new and old industries.

Glass that will withstand temperatures over 1,800 degrees Fahrenheit, glass that will defy searing chemicals that eat away stainless steel, is ready to speed the making of super-octane gasoline. One war plant already is using 27 miles of glass piping. Other types of heat-resistant glass are going into the tubes that are the heart of electronics.

Fluorescent glass that will glow brightly under ultra-violet light is used to replace the tubing coated with fluorescent salts now used in the new light fixtures. After the war this glass may cut down production costs and lengthen the life of light tubes.

Glass, under a new forming process, treated like a plastic in high-pressure molding machinery and can be forced into exact shapes that never before could be made quickly and cheaply from glass. This means that glass, one of the best insulators known, will be able to compete with plastics in new developments in electronics and electronics, where delicate and accurately made parts are required.

Glass blown into foam by a chemical "yeast," has become lighter than cork. It is now being used in floats for life rafts and life preservers and as building insulation. It can be sawed and nailed and drilled like lumber. If hit by a bullet it does not shatter.

Glass, three times stronger than silk, which have been pushing out into the textile industry for several years to meet special uses, have been notably improved by recent research. This is one of the parts of the story that can't yet be told in entirety.—From Wall Street Journal.

R.C.A.F. Awards

Wrestlers Who Have Received The Distinguished Flying Cross

Recent winner of the Distinguished Flying Cross for "gallantry and determination in the most hazardous circumstances" Pilot Officer Raymond F. Smith, (20) of Vancouver is a former air cadet. He belonged to No. 111 (Vancouver) Squadron and is the second member of this unit to be decorated. The other award winner is P.O. F. C. Allcroft, D.F.C., announced in July of this year. Similar recognition was also given last August to Pilot Officer Bennett, D.F.C., who belonged to a Winnipeg air cadet squadron.

P.O. Smith, latest award winner, is a Halifax bomber pilot with 30 operational flights to his credit. His air cadet application states he joined the squadron "for purposes of obtaining training to join the R.C.A.F. later," an ambition that has now been fully realized. Son of a Presbyterian missionary he was active in young people's work and in the Y.M.C.A. The young airman completed his pilot's training at MacLeod, Alberta in July 1942 and was commissioned after he went overseas.

WAR INDUSTRIES IN INDIA

The Indian steel industry is now turning out enough highspeed tool steel for its own requirements and for the manufacture of armoured fighting vehicles. Many special steels previously imported are now being made in India. Well over 100 locomotives of various types. Altogether over 500 units are manufactured per month, and this figure is rapidly increasing.

The first parliament of United Canada met in the Kingston General Hospital on June 1, 1841.

There were 14,500,000 people in Burma before the war.

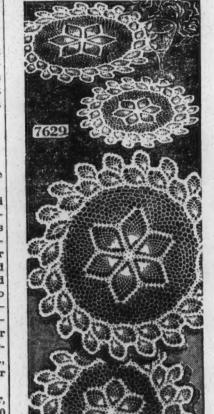

Roentgen rays, or X-rays as they are called to indicate their mysterious nature, were discovered a bare 50 years ago. Radium, the source of gamma rays, was discovered by Madame Curie a few years later. Until the war, radiography was an expensive laboratory plaything. With the outbreak of hostilities in 1939, however, it became obvious that more accurate methods were needed to inspect weapons for the fighting fronts.

Visible defects were not the only ones that these rays could check. The lives of many of Canada's fighting men might easily hang on some hidden flaw. On X-ray film, sections of the parts showed up as dark areas, and where a cavity in the metal left less material for the X-rays to penetrate, a corresponding dark spot appeared on the film. Gamma rays, originating in radium, penetrate the metal in the same way. They are not quite as sensitive, however, as X-rays.

Industrial experts have estimated that the use of X-rays and gamma rays in the Canadian industry makes it possible to save 25 per cent. less weight with safety. The Royal Canadian Air Force recognizes the importance of the use of these rays. They have made a ruling that they will not accept plans which have not been subjected to radiographic tests. The Inspection Board of the United Kingdom and Canada maintains such testing equipment in plants from coast to coast.

In the National Research Council, the Physics Division has a radiographic laboratory where radium and X-rays are used for inspection of aluminum, magnesium, bronze and steel. In addition to carrying out radiographic examinations, the staff works out techniques, advises manufacturers where how radiography can be used, and trains radiographers to carry on this work in Canadian industry.

Effective Dollies

A graceful pineapple edge swirls with style around these starry, crocheted dollies. Rich in design, easy to do, they look like real lace when done. Let them do your proud as a centerpiece, set on a shelf or a cradle and protection for a polished buffet-top. The size of the thread used makes them large or small. Pattern 7629 contains instructions for dollies; stitches; materials; needed.

To obtain this pattern send twenty cents in coins (stamps cannot be accepted). Household Arts Department, Winnipeg, Manitoba, Canada, 175 McDermott Avenue E., Winnipeg, Man. Be sure to write plainly your Name, Address and Pattern Number. Please enclose a stamped envelope and delivery of our patterns may take a few days longer than usual."

ONE AIR BATTLE

One of the great air battles of the Battle of Britain was fought at a speed of more than six miles a minute. Sometimes a flight would begin over London went on all the way back to the French coast.

A sand-dollar is a creature similar to a starfish.

LETTER FROM BRITAIN

Price Restrictions And Controlled Distribution Have Avoided Inflation—And Paved Way For Sound Post-War Economics.

(By George Horslow)

No one in Britain today imagines that the day the war ends everything is going to switch back instantly to the gay abandon of peace. No one, for example, imagines that income tax is going to go down, and that rationing restrictions and price controls are going to be lifted completely and at once.

It remains to take the people have worked hard; they have produced more per head than the people of any other nation on earth; they have been paid well for their "sweat"; but while the war has been on they have not had the chance of spending that money; they have so richly earned it that they have saved it. They have loaned it to the government in thousands of millions of pounds.

Swift Relaxation Of Controls

The Government is the trustee of those savings. It can only give the people to expect that the money, when withdrawn after the war, has approximately the same value, the same purchasing power as it had when it was given.

So far Britain, by the wisdom of the Government's financial policy embodying price restrictions and the controlled distribution of consumer goods, has been spared the agony of inflation; the wartime rise in prices has been reasonable. If there is still to be inflation in the final days of peace, those Government controls over the distribution of goods and the prices paid for them must for a time be maintained. The taxes and the controls will be gradually lightened.

Mr. Herbert Morrison, Home Secretary declared recently that in his opinion the way was the only way of avoiding social and economic catastrophe after the war. While neither taxes nor savings might need to be continued at the wartime rates the country could face the future with the knowledge that they would have to bear what had come to be regarded as the pre-war normal.

Mr. Morrison explained there is more to this question of control than the mere negative idea of forbidding people to do this and that. It would be indeed, all part of a positive programme of reconstruction, building and the strengthening of the national economy after the war. Mr. Morrison used the phrase "a programme of full prosperity under the necessary measure of public guidance and control."

There are still many millions of people in Britain who have not yet had a vivid realisation of the unhappy consequences of the uncontrolled inflation which followed the last war. And with this in mind, and in the hope that a great majority of their fellow countrymen are convinced of the necessity of a "planned approach" to total peace just as the military effort has been planned out to the last turn of a screw for total war.

Post-War Planning

A new exhibition has just been opened in London. Called the Technical Planning Exhibition, and it has been designed to show the help which Britain's engineering science can offer in post-war planning.

The exhibition demonstrates how the best use can be made of the money and materials which will be available in the immediate post-war years. A great deal of attention has been paid to the need for the most far-sighted planning in the reconstruction of the blitzed cities, and in the development of new towns and rural communities. Plans are displayed, for example, illustrating proposals for the general lay-out of the post-war city of Birmingham. There are plans to be seen of the layout which many of Britain's towns hope to adopt as soon as building can start after the war.

The possibilities of district heating and the regionalization of water supplies are emphasized, as also is the extended use which is to be made after the war of gas and electricity both in industry and the home. The domestic side of Britain's peace-time housing programme plays a prominent part in the exhibition, and there is, for example, a model kitchen which has been designed by a group of Birmingham women, incorporating all the ideas of the labour-saving device which they consider necessary to the perfect kitchen. There is a sound-proof room insulated by glass-silk.

Mr. Hudson, Minister of Agriculture, has just revealed the full extent of the achievements of Britain's farmers during the past season. "The most remarkable feature of the campaign," he said, "is by the shipping space saved. We have now got the final figures for 1942-43. They show an increase in shipping space saved of no less than 120 per cent over pre-war."

Turning Point In War

Germany Has Never Regained Initiative Lost At El Alamein

History may fix El Alamein as the turning point in the war. It was the Allies first strategic success of unrestricted war. It was also the time that Germany lost her initiative, never to regain it. In June of that year the Battle of Midway halted the tide of Japanese aggression in the Pacific, but it was a defensive victory. Stalingrad was a German disaster of vastly greater magnitude, the fruits of which Russia is still reaping; but von Paulus did not surrender his army there until three months later. El Alamein was a triumph so shining it need compete with no other. Today its rays reach almost to Rome.—New York Times.

R.C.A.F. Officers Dine With Sheik

—R.C.A.F. Photo.

Senior officers of the R.C.A.F. bomber wing in North Africa squeezed in a luncheon date with the sheik after lunch. Seated, left to right, are Wing Commander Georges Roy, D.F.C., Montreal; Group Captain C. R. "Larry" Dunlap, Sydney Mines, N.S. and Vancouver; the sheik; the sheik's corporal; Wing Commander Dan McIntosh, D.F.C., Regina; and Squadron Leader Paul Henault, Montreal. Standing in centre, rear, is Squadron Leader Dan McCann, Ottawa, with his arm about Mohammed, the sheik's son.

Fond Of Cooking

Mrs. Winston Churchill Would Like To Run A Restaurant

Mrs. Winston Churchill says if she had had to choose a profession she would have been a cook. "Better still," she told the newspaper reporter who asked the question. "I should like to run a restaurant. I love cookery books." But after the war, she added to a press conference, she wanted to retire into private life and look after her family, though her Aid to Russia Fund and the W.W.C.A. fund for women in the service. Mrs. Churchill has the same desire because she wanted to meet the press of Britain after holding one in Washington.

AWARDED D.S.O.

Wing Cmdr. E. F. J. Charles, D.F.C. and bar, of Lashburn, Sask., serving overseas with an R.A.F. fighter squadron, has been awarded the Distinguished Service Order, the R.C.A.F. announced. The announcement described Charles as a brilliant fighter pilot, credited with destroying at least 15 enemy aircraft.

WOULD EMPLOY PRISONERS

Farmer's Aid has agreed to the employment of approximately 7,600 men for winter operations. Alberta lumber firm officials said they would be willing to employ prisoners of war if the men were made available by Dominion government authority.

The area of Alaska is 588,000 square miles.

Buy War Savings Stamps Regularly.

Impressive Figures

Show How Great War Effort Of Canada Really Is

Whereas, at the peak of the first World War in 1918, Canada's war industries were absorbing only 10 per cent of the total national income, it is estimated that, during the year 1942-43, at least 43 per cent of the total national income was devoted to the war effort. It is likely that, during the present fiscal year 1943-44, war expenditures will amount to 50 per cent. of the total national income. The immensity of Canada's war effort may be seen from the foregoing figures.

The area of Alaska is 588,000 square miles.

Canadians Get Warm Welcome At Gravina, Italy

—Canadian Army Overseas Photo.

This scene shows the tremendous welcome that awaited Canadian soldiers when they entered Gravina, Italy. The liberated residents of the town brought out American, British and Italian flags and gathered in the village square. Men of a Western Canada reconnaissance unit were first to arrive at Gravina.

Canadian Gunners Cover Advance On Potenza, Italy

The capture of Potenza, Italy, by Canadians spearheading the Eighth Army's advance threw Canadian forces together in a combined effort after an all-out blitz on mines roads by engineers. While tanks and machine-guns blazed away at cleverly-concealed German positions, Canadian infantry worked its way into the town and took over. Here, machine-guns cover the advance.

Secret Weapons

Allied Nations Have More Than Matched Nazi Inventions

Early in the war the Nazis tried to use talk about "secret weapons" as another bogey with which to frighten free peoples. Their secret weapon was maniacal fear. Actually in new defensive and offensive devices Allied inventiveness has more than turned the scales.

We are now hearing about patrol planes using searchlights against submarines. How this has hampered U-boat tactics of overtaking convoys on the surface at night and has forced them to risk surfacing in daylight to recharge batteries is a fascinating story.

Sometimes now adaptations of old equipment or techniques have as great value as a novel device. Allied use of one or the other in a most important field of combat is indicated by the latest Field Air forces from Britain, particularly the R.A.F. raid on Leipzig.

Leaps in technology tell how the big bombers went out in rain and wind and clouds that have always before kept them grounded—the kind of winter weather that the Germans hoped might give them a respite. We need not pray overmuch into how Allied crews have been trained or equipped for all-weather attacks. It is enough to know that bad weather may not be a hindrance but a help in bombing Germany. —Christian Science Monitor.

Medical Examination

The Right Type Of Man For A Suitable Task

Air Commodore J. W. Tice, director of medical services, has announced a new system of medical examination and assessment in which physical requirements for ground trades have been lowered with a view to allowing fully-qualified personnel to be assigned to aircrew.

The announcement said the new medical examination system does not affect aircrew requirements.

Under the plan based on "job analysis," the physical requirements of each air force trade have been measured by physicians with the view of designating the right type of man to a suitable task. In certain trades, men with certain physical deficiencies will be employed, releasing fit men for aircrew.

As an example, Air Commodore Tice said that visual standards for groundmen have been reduced greatly, with provision even for a man with only one eye to be enlisted for restricted employment.

Cannot Be Baked

But Dehydrated Potatoes Can Be Used Every Other Way

There is a great Canadian story from New Brunswick. It relates to the biggest potato crop in history, worth \$20,000,000, and it will go to the fighting fronts in 15 pound tins, dehydrated spuds of the weight of 150 pounds. One tin will feed 15 men. Dehydrated potatoes never can be baked, but they can be boiled, mashed, French fried or scalloped and you can't tell the difference from the real potato. Leaders of the industry in New Brunswick declare that half the grain and potato crop of Canada should go into industrial channels, starch, alcohol, sugar, glucose, dextrose and other by-products. Perhaps chemistry and science when harnessed will be the depression beaters in the years to come.—St. Catharines Standard.

Handle Mail

Ontario Students May Supply Help For Christmas Rush

Officials of the Ontario Department of Education said secondary school students may work before Christmas in the postal service without interfering with their school studies.

The ruling, it was stated, is subjected to approval by local boards of education, such as Toronto, Hamilton, London and Windsor, where postal authorities have been asked to arrange their work to meet the situation.

Recently postal officials at Ottawa asked the Department of Education to approve the arrangement made last year, when 2,000 secondary school pupils worked in the postal service for 10 days prior to Christmas because of a labor shortage.

VITAMIN SENSE

When cooked vegetables are reheated, most of their vitamins vanish. This has been proved by tests made on freshly cooked and reheated vegetables. It's vitamin sense to cook only as many vegetables as will be used at one meal. If small amounts are left over it's better to serve them in salads than to reheat them.

A VITAL PROBLEM TO DEMOCRACY

Our Hope Is In The Youth Of The Nation

In our day we have seen how the regeneration of a generation of German children, through teachers who sold themselves to an evil doctrine, made that generation so powerful in its united purpose that it almost succeeded in destroying a world. In our day we have seen how the teachers of Norway, refusing to bow the knee to quelling doctrines, lost their lives maybe, but kept a nation's soul alive.

It is a sobering thought that all the things we hold most dear have no home outside ourselves. The noblest expression of our aspirations live on only as they are reflected in each new generation. Shakespeare lives, not in books, but in the acceptance of new minds that must first read these books and understand and find them good. All our great traditions, our concepts of liberty and freedom, our beliefs, our most earnest hopes have still this lack—this need. They must be accepted by new generations if they are to continue to exist for our children. Democracy will not remain because we believe in it. Only the acceptance of youth can carry it into the generation of youth. We talk of a new world, and the graybeards are busy with it, but they cannot assume it to us. Unless the promise that offers finds acceptance and belief in the mind of youth, there is small hope for it.

The simple gibe that "Those who can, do, and those who can't, teach," falls on less ready ears. We have a bitter knowledge of the power of teaching turned to evil, and that knowledge gives us a new evaluation of its power for good

Many of us can remember how, a little better than a quarter century ago, disillusionment settled on a world that was drunk with victory and fine words. We know how this disillusionment touched the minds of youth and the bitter fruits that came of it. It made us cynical, and young men see that it does not mean again "Victory—in war and in peace." It is a fine and noble aim to call on all the best in inspiration and instruction. If those who, in these bewildered days, are charged with the instruction of youth can implant in young minds a sense of responsibility for a world that has suffered so much, there is no other task with so great a promise. If youth can be made to see that the obligation of living is to give rather than to get, if it can learn to look for the sort of understanding that broadens horizons and that makes strange men our brothers, then the problems of world peace may not be so distant and difficult and unnatural as they now appear.

Even in Canada there are vital problems that we know to be problems of misunderstanding. Even knowing that, however, our set ways will not permit us to change. But another generation might change if it were wisely and broadly and generously guided.

We think of education, of what it may do and how it may serve, and of the men and women who are its ministers. It is well for us to give thought to them for in their hands is the hope of our world.—Liberty Magazine.

GEMS OF THOUGHT

ATTENTION

The power of applying attention, steady and undivided, to a single object, is the sure mark of a superior genius.—Chesterfield.

If there be anything that can be called genius, it consists chiefly in ability to give the attention to a subject which keeps it steadily in the mind, till we have surveyed it accurately on all sides.—Thomas Reid.

Other things may be seized with might, or purchased with money, but knowledge is to be gained only with study.—Johnson.

Few things are impracticable in themselves; and it is for want of application rather than of means, that men fail of success.—Rochefoucauld.

The devotion of thought to an honest achievement makes the achievement possible.—Mayer Baker Eddy.

No abilities, however splendid, can command success without intense labor and persevering application.—A. T. Stewart.

PARACHUTE SILK

Beside long and well dressed British women may be wearing anti-war fashions from the silk of used parachutes. This was included in a program announced by the London Board of Trade for utilizing rejected government material.

WORLD HAPPENINGS BRIEFLY TOLD

A hot mid-day meal costing pupils one penny a week is provided by authorities of the vocational school.

After 73 years research scientists in Britain believe they have developed a potato with the power to resist blight.

A quilt of "glass silk" forms the foundation for the floor in sound-proof rooms for the flat of the future at a practical planning exhibition in London.

New Zealand has offered to panel and furnish a room in the City of London's famous Guild Hall, which was wrecked by bombs in the great " blitz" and is being reconstructed.

The percentage of losses of aircraft making the North Atlantic crossing was less than one-half of one per cent. for the year ending Sept. 30, 1943, British Air Ministry announced.

Long range fuel tanks constructed from paper, animal glue and gelatine now are carried by British fighter planes. There is little loss of material when they are jettisoned.

The United States shipped 19,722 tons and the United Kingdom 40,848 tons of supplies to French West Africa for civilian use during the first six months of 1943, the War Cabinet announced.

Taxis owners predict a cab-famine for London this winter. There are only 4,500 taxis left in the metropolitan area, about half the pre-war number, and the demand has increased 50 per cent.

Cmdr. Stephen King-Hall, British Conservative M.P., told an Empire Club audience at Toronto that the price civilization is paying for war totals \$50,000 a second or \$422,000,000 a day.

Course Is Interesting

Women Of Royal Canadian Air Force

Study Aerial Photography

Young wings today are women photographic students of the Royal Canadian Air Force while training for "ground crew" work in service darkrooms and laboratories.

From take-off to landing they are in for a thrill-a-minute in this course of instruction. The girls average three flights under the supervision of trained instructors at the R.C.A.F. photographic school at Rockcliffe Air Station near Ottawa. They are taught all ground crew photographic processes, and also given brief aerial photographic experience so they will understand problems that confront flying men who turn their films over to the airwomen for finishing. Previous to one recent flight, ground preparations were carried out by the girls.

Following four and one-half months' instruction in both aerial and ground photography, the air-women travel on posting to stations in all parts of Canada, where they are releasing men for air crew duties.

HOME SERVICE

CURTAINS ADD A TOUCH TO A ROOM

Gay Curtains

What could be more dainty for a young girl's room than these sweet, fresh draperies? Not only are they attractive but they are easy to make! The curtains in the above illustration have 15-inch tiered ruffles which are very simple to make.

You'll be surprised how professional-looking curtains made by yourself will look—not only smart, but also comfortable, because they will reflect your own personality.

You can definitely add a touch of individuality to your home by making your own curtains and draperies.

Find out how to make curtains and styles to choose for various types of windows.

A graceful swag valance may be just the thing that is needed in one place; a gaily decorated corner in another.

Our 32-page booklet will help you in the ideas as well as give full instructions for making curtains. New ideas in window treatments are easy to carry out with step-by-step directions and diagrams.

Send 10 cents for your copy of "New Ideas in Making Curtains and Draperies" to Home Service Dept., Winnipeg Newspaper Union, 175 McDermott Ave. in Winnipeg, Man. Be sure to include plainly your name, address, and name of booklet.

Care Of Mattresses

Require Extra Attention As Material Is Becoming Scarce

Canadian housewives have developed many thrifty ways during the war years. These are days to be properly appreciative of a good mattress. War workers must have a restful sleep, and if mattresses are bumpy, sleep suffers. The materials from which mattresses are made are becoming increasingly difficult to procure, and the situation is not likely to improve for some time.

A pad should be used over the mattress. This protects the mattress and makes for sounder sleeping comfort.

If the mattress rests on open coil springs, use a pad between spring and mattress. An old quilt or cotton blanket is best. This will insure against snagging or tearing the mattress. It can be held in place with tapes, stitched to the pad and tied to the spring frame.

A light muslin cover is a good investment for any mattress. It will keep the dust out and is removable for laundering.

Turn the mattress weekly, one week front and to end, the next week from side to side. This helps to equalize wear and bumps and hollows are not as likely to develop.

During fine weather, open the window wide and sun and air the mattress. Throw the covers back and leave the bed open for about an hour before making it up.

The mattress will receive new vigour if every four months it is aired for half a day and cleaned with vacuum cleaner attachment or whisk broom.

ROYAL INDIAN NAVY

Units of the Royal Indian Navy did fine work in the Battle of the Atlantic, in the Far East, and in Persian Gulf on India's western frontiers.

The entry of Japan into the war brought the Royal India Navy right into the fighting line. Among other feats, it was responsible for organizing and carrying out the evacuation of 40,000 Indians from Burma ports.

STUDY BOMBING MAPS

At a Survey Training Centre sponsored by the A.R.C.A.F. and the United Kingdom government, Lt. Col. G. C. Lees, now responsible for maps, has been asked to review maps from photographs taken by reconnaissance pilots. By studying the revised maps the R.A.F. learn exactly what remains to be destroyed at the targets shown.

The first manufacturer of pistols lived in Pistola, Italy, which gave these weapons their name.

THIS CURIOUS WORLD

Canadian Rail Chief Invests U.S. Colonel

It's news when a Canadian railway president invests a Colonel of the United States with the eagle insignia of his new rank. This unique ceremony took place somewhere in northern Manitoba where Lieut.-Col. J. F. Fraim, Officer Commanding, United States Army Forces, Central Canada, headquarters Winnipeg, received news from Washington that he had been appointed full Colonel. He was on a trip inspecting the Canadian National Railway's northern facilities with R.C. Vaughan, chairman and president. The investiture took place in Mr. Vaughan's car, "Bonaventure," which was taken as an omen of "good going" for the Colonel. Born in Kentucky 33 years ago, brought up in Mississippi, Colonel Fraim's home, now, hadn't been for the war, would be in Beverly Hills, Calif. He has seen service in all parts of the world.

Fireproof Clothing

Will Soon Be A Reality Due To New Chemical

The discovery of a new chemical fire retardant known as "CM" has put into the hands of man another potent weapon to keep fire, his most valued but least trusted servant, in check, according to John Harwood-Jones, writing in C.I.L. Oval. Clothing of all kinds, from little girls' frilly party frocks, sheerest negligees, velvet evening gowns, to welders' overalls and military uniforms may now make fire resistant by dipping or spraying them with the new chemical, though they may char upon contact with fire, they will not burst into flame. Moreover, this chemical newcomer does not affect the "feel" or appearance of fabrics and it would take an expert, or a flame, to distinguish between treated and untreated materials. The most immediate use of this fire retardant chemical, however, will be in the treatment of soldiers', sailors' and airmen's uniforms, and of textiles for war machines such as tank linings, civilian use having once again met military demands.

Irish moss found in the waters off the North Atlantic coast is used in puddings, medicines, cosmetics and lotions.

Buy War Savings Stamps Regularly.

Free Legal Advice

The Poor Man's Lawyer Association Is Operating In Britain

Since the outbreak of war, further steps have been taken in the United Kingdom to ensure that free legal advice reaches those who would otherwise be unable to afford it. The Poor Man's Lawyer Association, which is run by the Law Society and was established before the war—continues to give free legal advice to poor persons. In addition, the Poor Man's Lawyer Association, introduced since the war, has been set up by surveyors and others to give free advice on the War Damage Act.

MAKES A DIFFERENCE

When Gen. Sir Bernard Montgomery was talking to his boys of Amesbury school in Great Britain, shortly before he left for the attack on Sicily, told them that the main difference between the German and the British soldier is that the German soldier laughs at other people's misfortunes while the British soldier laughs at his own misfortunes."

Has Big Possibilities

But Helicopter Not Yet Adapted For General Use

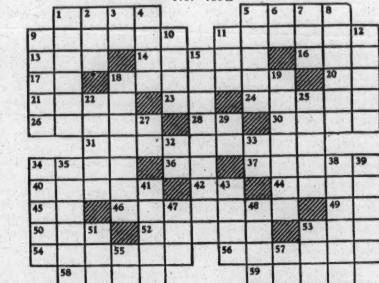

According to the experts mass production of the helicopter is not the answer to the readjustment problem which will face the aircraft industry when the war demand drops off. The helicopter is technically safe and fool proof in the hands of a trained operator. It needs no airfield. But engineers like it to the automobiles made before the last war. It has big possibilities in the future when it has been through many stages of refinement and perfection. Also, the helicopter is not yet cheap to build.

BRITISH ARE PAYING

Some idea of how the British people are paying as well as fighting is seen in the fact that the total amount of the contributions of the British people to war loans, post war loans, and other government funds, from November 29, 1939, till August 24, 1943, is \$27,222,828,150. And of this amount, \$26,451,840 has been lent to the British Government without interest.

ANSWER

- S J L I N E R P R A C

I'm working harder than ever these days. Have no time to be troubled by constipation due to lack of the right kind of fiber in my diet. This good cereal is a sensible way to correct that condition . . . instead of taking cathartics, which only give temporary relief.

Why not try eating KELLOGG'S ALL-BRAN every morning and see

if this delicious cereal doesn't help you become "regular"...naturally! Get your KELLOGG'S ALL-BRAN daily . . . drink plenty of water . . . and discover for yourself how much easier and more comfortable it is to eat KELLOGG'S ALL-BRAN! Available in two convenient sizes at all grocers. Made by Kellogg's in London, Canada.

Beau Jonathan

by J.B. Ryan

CHAPTER X.

ANNE looked up questioningly and even Jonathan frowned, for neither the girl nor the man yet saw the net being woven by the tall dark man. I am willing," said Lord Farquhar, "to let Master Hale go his way—for a price."

"Is that price, my lord?" inquired Jonathan, "or is it—"

"Is that Mistress Jamieson going away with me?"

"No!" Furious, Jonathan leaped up and would have flung himself upon Farquhar but the spittoon had not Anne sprung forward also, catching him about the arms.

As he struggled with the girl Jonathan heard the door open and shouted: "Summon the bailiffs, Farquhar!"

"I'll swing from a hundred giblets before I let her even listen to your demands, you prude!"

"Wait, Jonathan! Wait!" implored Anne. "Do not want you to be killed!" As Jonathan subsided, she turned to him, still, and laid her head to speak on his shoulder.

"I accept, my lord. Spare this man and I shall go with you."

"Amen!" cried Jonathan.

The detail agreed on his business. If you love me—"

Her face was colorless. "Do this because I love you, Jonathan—please do!"

"I will not permit it! I shall follow you downstairs and, if Farquhar will not fight me, I shall order my servants to seize him."

"The show is over, now downstairs," said Farquhar. "Shall we wait what I know concerning you?"

"You see—Jonathan?" Anne's smile was faint.

"But—Anne—wasn't the shame you would accept will not save me. Lord Farquhar's promises are worthless. What is to prevent him from having sex with you?"

Farquhar sneered. "You can make absolutely certain of saving your worthless carcass by getting out of London very night."

Jonathan backed away from the girl. But sudden as was his lunges the desperate Anne hampered his movements to such an extent that Farquhar's purpose was beside Jonathan as he wore free. His lordship's lifted arm descended snarlingly, crashing the butt of the pistol against the back of the head and the stricken man fell forward to the floor and into darkness.

WHEN his senses cleared, Jonathan found himself propped in a heavy chair, a gasping man. Farquhar had to know the clothes he wore the strings already about Jonathan's wrists, bound his legs securely to the frame of the chair. To one side stood Anne, face white as the petals of her dress. Her anxious eyes were fixed on Jonathan, but when she saw that he had revived, her glance lowered, her downcast lashes making brown curves against her cheek.

"Your servants should find you presently. They set you free," Hale said. "For your own safety, Hale consider yourself the loser in this game. I shall arm my servants to-night and warn them against your possible coming. If you attempt to follow me, you shall be shot on sight."

The gag made it impossible for Jonathan to answer. But the eyes of the girl, the expression of her face as eloquent as any words. Farquhar hesitated, fingering the pistol that tempted him, then nodded to himself with a smile.

He found ink, quill and paper. As his lordship wrote busily for a full minute, Jonathan tried to sign for Anne, to give her a signal, but he was as eloquent as any words.

Farquhar hesitated, fingering the pistol that tempted him, then nodded to himself with a smile.

He found ink, quill and paper. As his lordship wrote busily for a full minute, Jonathan tried to sign for Anne, to give her a signal, but he was as eloquent as any words.

At bedtime Rob Vicka VapoRub got his back was turned. When Anne remained quiet and passive, as much a prisoner as the man in the chair.

FARQUHAR folded the paper, dropped it on the flap and stamped it with the seal lying on the desk.

"See this document, Hale? You are

then he nodded. "It lies some distance from here, sir. We shall have to cross most of the city to reach the place." He stared doubtfully at the gun in his hand. "There is to be trouble?"

"The role of Beau Jonathan has come to an end, Tucker." In spite of his haste, Jonathan had to adjust his coat and collar with what might lay ahead. "Someone is to be killed tonight. Before morning I may be buried either on a bier or on the floor of a tomb. You may come to grief if you accompany me."

Tucker shoved the plait beneath his coat and gathered the reins of the horse. "I shall not desert you, sir."

"Thank you, Tucker." Jonathan smiled gratefully. "But I give you your orders. From now on, our association is ended. I have given you money enough to keep you for the remainder of your life."

"You have that," nodded Tucker.

"I have, so—so, I'll be off to the bitter end. Come, sir, and I will show you the way to his lordship's residence."

The old sweep who had climbed into the saddle during the conversation, flicked his mount with the reins and turned the horse into the alley leading to the stable. The horse came up, making it possible to travel the streets at any desired pace. In fact, they were able to move more rapidly than the sun in the course of the day.

Most of London was asleep and the thoroughfares cleared of the usual traffic.

The horse went through the night at a gallop. "Thank you, sir," the old sweep had ridden, and he bounded considerably as the hoofs pounded the cobblestones, designed to maximize hard biscuits, designed to mix two pounds to a quart and to mix it right away as it must be kept in airtight containers before mixing. The resin and alcohol are stirred until dissolved. Under no circumstances must the solution be heated. It is well to keep in mind size of container when mixing, as the addition of the resin in these proportions practically doubles the volume of alcohol.

A small paint brush is used to apply this repellent to the trees. If it becomes gummy while using, a small amount of alcohol can be added to restore the original condition.

And they are closely related, too, to Soda Crackers which are so unevenly used in Canada.

Soda Crackers have much to recommend them besides their tasty flavor. They are the "State of Life" of the War.

Given war bonds, for instance, contains moisture to 36% of its weight, but, in Soda Crackers the moisture content is reduced to 10%.

They are made from dehydrated food products. Soda Crackers need no special preparation. You eat them as they come. They are always ready to eat.

They contain 100 calories. It's hard to beat Soda Crackers, which, on the average, give you 109 calories for one cent. This is second only to nuts and dates which contain 109 calories for a cent and miles ahead of chicken which gives only eight calories for a cent.

They are high in protein, from their high nutrition value and economy. Biscuits and Soda Crackers are popular mainly because of adaptability. You can enjoy them alone, spread with a little butter. They go well with marmalade, marmalade, soup, peanut-butter, etc. And they are so handy—both for serving at regular mealtimes or between-meal or bedtime snack.

(To Be Continued)

Matt Tucker continued his old trade.

Perfection Fit

If your figure is no longer slim as a soda-straw you'll like Pattern 4548. The smoothly fitting, straight-cut panels of the slip, the perfectly cut panties are comfortable beyond compare. The soft, sheer lace-trimmed lingerie beads all for long wear and is most appreciated as a gift.

Pattern 4548 is available in materials 18, 20, 24, 26, 30, 36, 42, 44, 46. Size 16 takes 2½ yards 42-inch fabric.

Send twenty cents (20c) in coins (one cent cannot be accepted for this pattern). Write plainly Name, Address and Style Number and send orders to the American Adams Pattern Dept., 1200 Main Street, Newmarket, N.H. McDermott Ave. E. Wimpey, Man. "Because of the slowness of the mails delivery of our patterns may take a few days longer than usual."

Blaine reeled back, his face livid with pain and rage. "Paname, Hale!" he snarled thickly. "I demand satisfaction!"

Jonathan regretted the bite he had not time for apology. He had to Sir Maurice back into the room.

Jonathan's knotted fist drove into the face of the speaker. "You fool!" he grated. "Why didn't you stop me?"

Youth Group Has Big Role In Russ War

(By David M. Nichols, in The Chicago Daily News)

Moscow.—Twenty-five years ago delegates representing 22,000 young people of the newly born Soviet Union gathered here to form the Communist League of Youth. That organization, more generally known as the Komsomols, has persisted. It has played a powerful role in the nation's development, as youth movements must always do in periods of revolutionary growth.

Now, during war, it is taking an even more important part, for youth continues to carry the main burden of the war.

More than 1,500,000 young workers have been trained during the war period, in industrial schools in which the Komsomols take a great interest.

School youngsters, during the summer, volunteered under the leadership of the Komsomols, to work in farms. In 1942 more than 4,700 men answered the call, contributing almost 146,000,000 working days. This year's figure is unavailable, but it is unquestionably greater.

Within the army itself the Komsomols have been spearheads of wide training of snipers, which began in Leningrad and has spread throughout the country. They have taken over some special tanks, destroying tanks.

Almost 900 Komsomols have earned the Soviet Union's highest decorative, Hero of the Soviet Union. During the first nine months of this year, 100,000 received orders or medals of some kind for distinction in military service.

—V—

Allies Unable To Meet Food Needs In Italy

Naples, Oct. 24.—(Delayed)—There is serious danger that the United States and Great Britain will not be able to meet the problem that faced them last fall and winter in North Africa, when they found themselves unable to fulfill their obligation to relieve the food shortage created by years of collaboration with locusts.

In North Africa, we were unable to obtain adequate supplies of food for the civilian populations because the military authorities naturally pre-empted all food for military purposes. At the beginning of that campaign some ships containing relief supplies actually returned to British and American ports without having loaded those ships because the military authorities urgently needed fresh cargo space for war materials.

Kings Job Is Advancing

We came to Italy knowing that we would be expected to relieve food shortages in the densely populated areas of Sicily and central Italy. With the unprecedent North Africa experience behind us, we knew what a terrific problem we faced in relieving that situation, yet we had to do so to complete the job. It was understood that breadstuffs, concentrated foods and powdered milk would be available and would be sent immediately a few days after Naples' capture.

We have managed to receive some cargoes of this kind. There was a small amount of grain in Naples when the first batches of white flour arrived—days late—and the black market almost exploded. We have been able to supply a small part of it. Since then cargoes have been arriving spasmodically, almost invariably late, and the black market has not seemed to arrive at all. Naples has had a sketchy supply of Alitalia food and most of the small towns we have captured outside metropolitan areas have seen little or none of it.

Obviously those responsible for the food supply—nearly the Allied Military Government—have not been enjoyed enough authority to obtain the necessary priorities.

It is estimated that our bombing bilked us of 1,000,000 tons. Italians fought the Allies for three and a half years and, by barring the Mediterranean to us, were largely responsible for our shipping situation. The Germans robbed them blind and gave them nothing. So the Italians can say nothing about the lack of food. The important thing is that we undertook a difficult obligation openly and consciously. That millions of Americans are depending upon us to fulfill it and that we do so.

No Stars, But Hunger

You may find many starving people in this area, but most people are much hungrier than usual. They are all natural bread and spaghetti eaters and depend for their main sustenance on flour products. The reduction of bread rations from 150 grams daily to 100 grams in some districts where bread is issued in an emergency has been a great hardship. The ordinary fixed price for spaghetti during the war was about 3 lire a kilogram. It cost 6 cents per pound and on the black market about 10 cents per pound, twice that price. Today it is 125 lire a kilogram.

Certainly as Allied citizen cognizant of the facts can claim that we have done very well by the local stomachs.

More Farm Workers Needed For Industry

More men, who can be spared from the winter months, are needed for the farms for jobs in other essential industries. A minimum of 150,000 men are required. Men who are needed for the farms should not leave. Men who do have to return to the farms when their services are required there. Farm workers going into industry will be entitled to a week's vacation. Transportation will be provided free, if a distance has to be travelled.

Workers from the farm, already given postponement under the Military call-up by reason of being farmers, will continue on postponement until the farm手 should take other approved essential employment.

BEEF PLASMA

Julia H. Petersen in Science reports that he has been investigating the possibilities of beef blood plasma as a substitute for horse plasma. His plasma is modified to avoid toxic effects. Dogs brought into shock by massive bleedings have been successfully treated with the modified beef plasma.

DIED TO SAVE MEN

The 77th Victoria Cross of the war has been awarded posthumously to Acting F/Sgt. Arthur Aron, an R.A.F. pilot from Leeds, England, who although severely wounded in a dog fight, used his last ounce of strength to make sure the crew of his battered aircraft did not fall into enemy hands.

BOOTLEGGERS CAUGHT IN EDMONTON ROUND-UP

Edmonton.—Six men from Winnipeg, two from Edmonton, have been arrested for sale of illicit liquor in Edmonton and at points along the Alaska Highway. Police said the men are charged along with one Winnipeg man in charges in connection with shipments of a "large quantity" of illicit liquor and Manitoba Control Board officials from Winnipeg to Edmonton.

CANADIANS' BLOOD IS USED IN ITALY

Montreal.—Canadian civilians has reached the front line. Surg.-Capt. C. H. Best, Toronto, director of the Canadian National medical research Bureau, disclosed here that Canadian blood serum is being used in Italy, helping to save the lives of wounded Canadian, British and American soldiers.

CANADA TO HAVE FIRST AMBASSADOR TO U.S.

Ottawa.—Minister of Mackenzie King today announced the exchange of ambassadors between Canada and the United States.

John H. Leighton McCarthy, Canadian minister to Washington, the first ambassador appointed anywhere. Ray Atherton, United States minister here, became the first ambassador to represent a foreign country in the Canadian capital.

V—

25-CENT DRAWBACK ON LOW GRADE WHEAT

Ottawa.—Agricultural Board and Price Board announced jointly in Ottawa on November 14, effective November 15, the Dominion government will pay a drawback of 25 cent per bushel on wheat purchased for feeding purposes of the grade known as Manitoba No. 4 Northern and graded equal or lower value. The drawback will replace one of 8 cents per bushel which the government has been paying during the past year so on when of any grade if purchased for feeding.

WINNIPEG AGAIN TAKES RUGBY TITLE

Winnipeg, Oct. 24.—(Delayed)—Playing on a fumbled ball to break a grueling football game in the fourth quarter, Winnipeg R.C.A.F. Bombers defeated Red Deer, Alberta, Roughriders 11-10 to win the western Canadian football championship for the seventh year.

Both teams defeated in the national final a year ago by Toronto R.C.A.F. Hurricanes, will go to Toronto again to battle either Hamilton Flying Tigers or Almonte Balto Bears or the Quebec champions for the 1943 Canadian championship.

Household Hints

A small amount of lemon juice or orange juice and grated lemon rind will add flavor to stewed fruit or dried fruits. Use about a tablespoon of juice and 1/4 teaspoon rind for each two cups of fruit.

Liquid left from mustard pickles is excellent to mix with chopped cold meat and cheese to be used as sandwich fillings.

Cheese is melted in a cloth wrapped over a vinegar and pepper mixture in a covered dish, will keep moist for some time.

Cottage pudding may be made from leftover cake by heating the cake for 10 minutes in a double boiler and serving it hot, topped with a pudding sauce.

When a recipe calls for mashed potatoes, this is the way to prepare them. Peel, parboil, mash the pulp through a wide-meshed strainer, then beat the pulp and measure required amount.

Cookies that stand too long in the oven will become crumbly. As soon as the cookies have cooled, store them in airtight jars.

Celery leaves, sprigs of parsley and sliced onion may be added to soups. Add the stems to the soup while it is cooking and strain before it is served.

Well cooked chicken livers make a delicious filling for toasted sandwiches.

Fight Tuberculosis With Christmas Seals

The Anti-Tuberculosis Christmas Seal Sale is on in Central Alberta. The Red Deer Rotary Club is again sponsoring the work. All the money raised is used to fight tuberculosis. The activity includes the operation of health camps, providing free X-ray examination for all the people of Central Alberta and co-operating with the Provincial Department of Public Health in a program of education on tuberculosis.

Following the last war, more Canadian soldiers died of tuberculosis than were killed in action. Your support of the Seal Sale will help prevent a repetition of this condition.

Recently 818 persons of all over the district were given a free X-ray examination. Red Deer Nine persons were found to have active tuberculosis and eight inactive. Further examination of 27 persons has been requested.

Fight tuberculosis. Buy Christmas Seals.

Patriotism and Prudence demand that you SAVE NOW!

Your savings are urgently needed by Canada now for the purchase of munitions and war supplies. You LEND that Canada may pull her full weight for Victory. That's PATRIOTISM.

Your savings will return to you when Peace comes to provide security in the period of readjustment that will follow the War. You save for the future. That's PRUDENCE.

BREWING INDUSTRY OF ALBERTA

William (Wild Bill) Bendix, chief support to Alan Ladd in Paramount's new picture, "China," is here shown regaling reporters at the flexibility of a sheet of the new window glass (its development is said to have cost upwards of \$100,000), on his recent visit to the plant of The Industrial Glass Works Co. Limited, Montreal. Mr. Bendix throws all the forcefulness of his "Wake Island" technique against a vortex of bombs and bullets in his new role in this revealing and dramatic picture of the China of today.

"What's holding you back brother?"

THE fellows who are in there pitching at the Axis didn't need any formal invitation to race into this scrap... and they're beginning to wonder what happened to you. Those fellows are in the thick of things... smooth-working teams of fighters... each man doing his part.

Besides real man-action and adventure, you'll get skilled technical training and experience that employers will rate highly after the war.

If you really want to pull your fair share, and if you're fit, there's not a thing in the world to hold you back. You can go aircrew today. You can win your wings in a few short months under the guidance of veteran airmen. What about it, brother?

JOIN THE FIGHTING COMRADES OF THE SKIES

Recruiting Centres are located in all the principal cities in Canada.

Mobile recruiting units visit smaller centres regularly.
